

SCS FIELD SERVICES

REMEDIAL CONSTRUCTION SERVICES

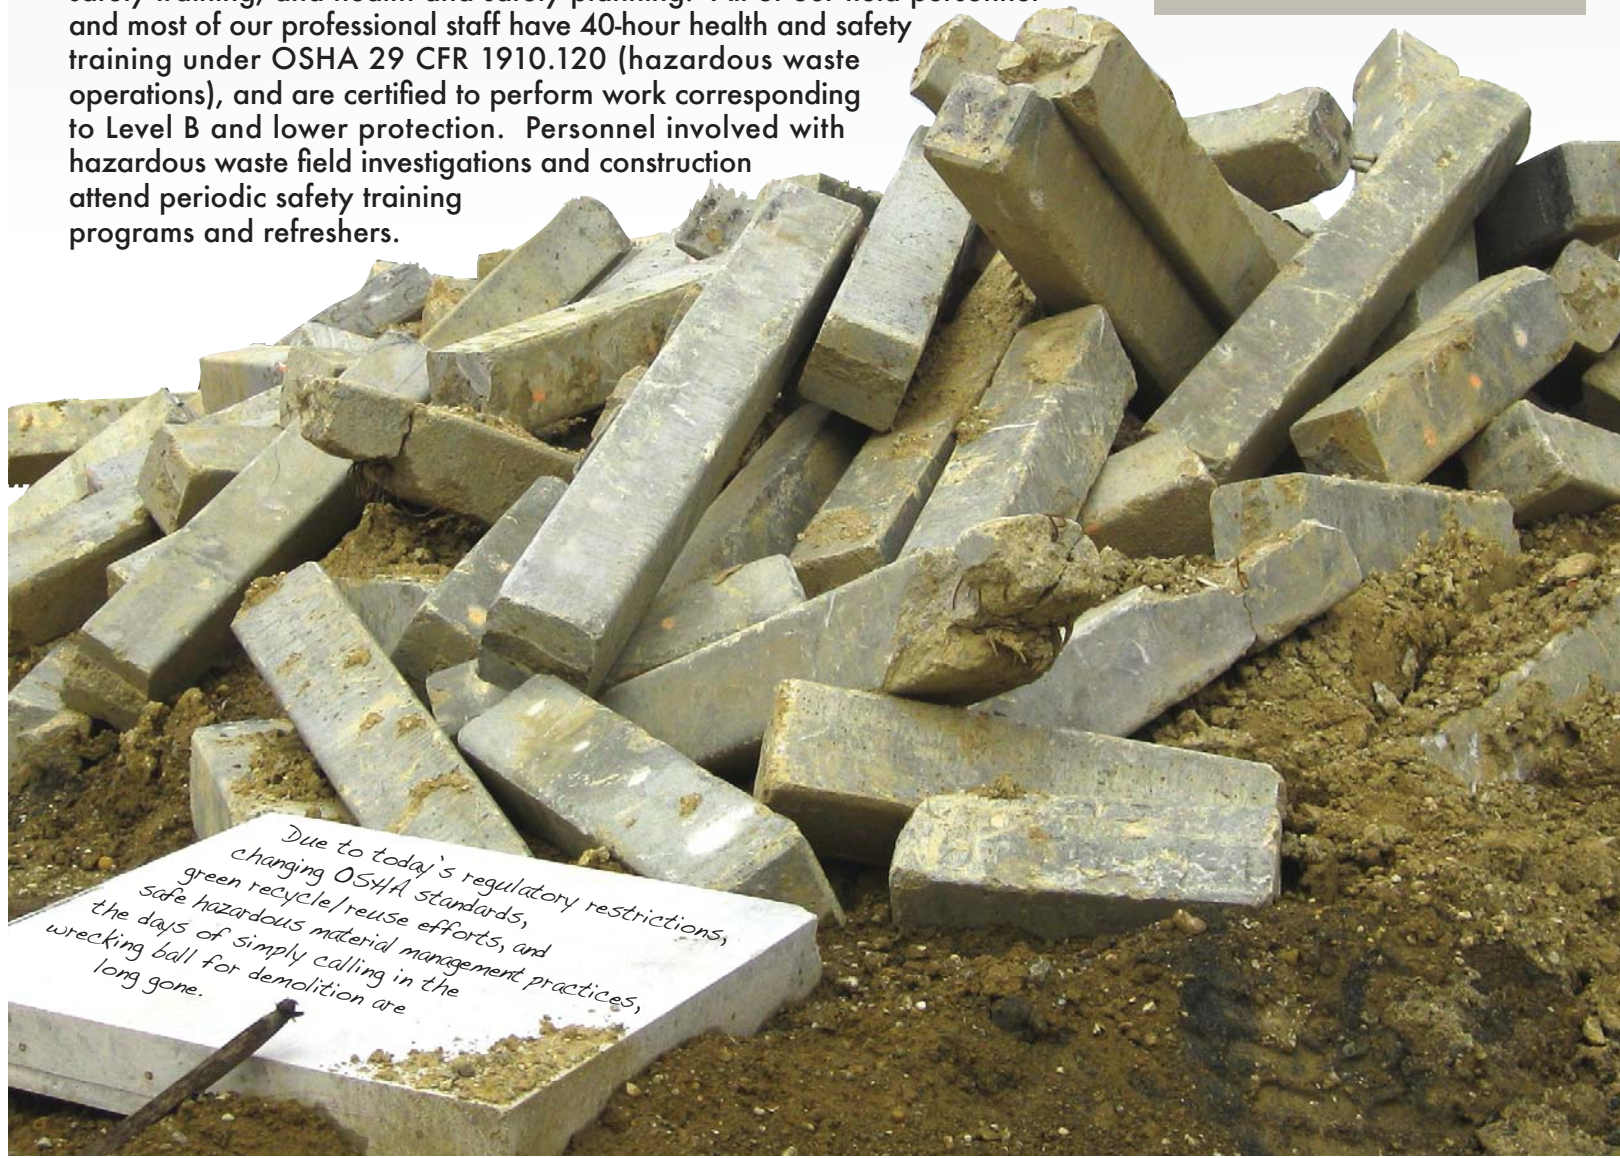

SCS Field Services (SCS-FS) Construction delivers responsive construction management and field crews to provide a common-sense approach to the implementation of environmental remediation construction projects. SCS-FS Construction has provided specialized construction services since 1985. As one of the oldest and largest turn-key environmental consulting and remedial construction firms in the nation, SCS-FS Construction is a Class A - General Engineering Contractor with HAZ - Hazardous Materials Certification. Clients can be confident that their job will be done right.

SCS provides a completely integrated general construction, engineering, and scientific team experienced in solving complex construction and environmental problems. This integration is unique and the envy of the construction industry. With offices and experience nationwide, our resources and internal network create a broad base of knowledge to draw on to solve complex multifaceted environmental problems.

SCS stands behind our uncompromising commitment to safety. SCS maintains an ongoing health and safety program that consists of medical monitoring, safety training, and health and safety planning. All of our field personnel and most of our professional staff have 40-hour health and safety training under OSHA 29 CFR 1910.120 (hazardous waste operations), and are certified to perform work corresponding to Level B and lower protection. Personnel involved with hazardous waste field investigations and construction attend periodic safety training programs and refreshers.

Typical Projects:

- Remedial Action
- Above-ground Bioremediation
- Enhanced In-situ Bioremediation
- Surgical Removal of Hydrocarbon-impacted Soil
- Removal or Treatment of Contaminated Soil
- Demolition of Chemical Plants
- Green Demolition
- Removal of Underground Storage Tanks and Structures
- Mine Closures
- Capped Landfills
- Redevelopment of Environmentally Impacted Properties

SCS has extensive experience with both "traditional" and "cutting edge" remedial technologies. We customize our remediation systems to meet our client's needs. We feel that only after the extent of impact is assessed and a cleanup level established may a remediation system be properly designed and built. SCS-FS provides high-level technical engineering services and practical hands-on construction and operations expertise, a combination generally unavailable from other environmental engineering construction firms. This unique combination allows SCS-FS to provide clients with cost-effective solutions to difficult environmental problems. SCS-FS's services are utilized by municipalities, private landfill management companies, environmental contractors, diversified energy companies, and engineering firms.

Remediation Services

- Remediation Construction
- Construction Management
- Construction Estimating and Engineering
- Environmental Earthwork and Soil Decontamination
 - Hazmat Earthwork
 - In-situ-Vapor Extraction and Sparging
 - In-situ Chemical Oxidation (ISCO)
 - Soil-Cement Stabilization
 - Deep Soil Mixing and Stabilization
 - UST/AST Removals
- Facility Decommissioning and Demolition
 - PCB Decontamination
 - Lead, Asbestos, and Pesticide Abatement
 - Recycling and Salvage
- Stormwater and Erosion Control Measures

In an age when consolidations, mergers, and public ownership of environmental firms are common, SCS Field Services, as a division of SCS Engineers is proud to be one of the oldest and largest firms in the industry still operated like a professional service firm instead of strictly as a business.

We are completely owned by our employees, and virtually all of our senior managers are licensed professionals in one or more jurisdictions.

We are an environmental construction firm that solves your environmental challenges.
