

JONATHAN MORRISON

### **Specialty Certifications**

EPA 608 Refrigerant Handling Certification (Type I & II)  
Forklift Certification - 29 CFR 1910.178

### **Professional Experience**

Mr. Morrison joined SCS Energy in 2023 as SCS Energy's Commissioning Manager and Engineer. He brings with him eight years of experience as a technician and manager of landfill gas-to-energy power plants utilizing Solar Mercury 50 and Taurus 60 turbine engines, and Caterpillar 3520 reciprocating engines. Prior to that he spent 13 years developing his leadership skills and an officer in the United States Navy.

In his dual role, he leverages his experience and education to directly supervise commissioning, startup, and performance testing of renewable natural gas (RNG) plants designed by SCS Energy; and works with clients and our process and mechanical engineering teams to resolve concerns in real-time and improve future designs. His current projects include a 1,500 scfm dairy RNG facility in California, and a 6,000 scfm landfill RNG facility in Virginia.

Technologies employed at the RNG plants include: non-regenerative media for hydrogen sulfide removal, membranes and pressure swing adsorption (PSA) for carbon dioxide removal, PSA for nitrogen removal, and non-regenerative media for dehydration.
