Professional Experience

Donovan Dickey has experience with an array of environmental compliance and construction quality assurance projects. His environmental consulting experience includes conducting phase I and phase II environmental site assessments; environmental projects involving contamination assessment, remedial system construction, operation of remediation treatment systems; environmental due diligence; pollution prevention; storage tank removal; ground water and soil sampling; landfill gas compliance and performance testing; and surface emissions monitoring.

Examples of project experience include:

Assessment and Remediation

Bethune-Cookman University, Phase II ESA, Daytona Beach, Florida, 2022. Donovan has provided field planning and technical support at a historical service shop site, to include: GPS Trimble mapping, contractor oversight (drilling), collecting soil and groundwater samples in support of closure.

Confidential Client, Weedon Island, Florida, 2018 – 2019. Donovan has provided field planning and technical support at a historical waste disposal site, to include: GPS Trimble mapping, contractor oversight (excavation, drilling), collecting soil and groundwater samples in support of closure.

Lennar Homes, Various Sites, Phase I and Phase II ESA, Miami-Dade, Florida, 2019-2022. Donovan has provided field planning and technical support at multiple land use redevelopment sites in Miami-Dade County, to include: GPS Trimble mapping, contractor oversight (excavation, drilling), collecting soil and groundwater samples in support of closure.

Stauffer Management Company, Groundwater Treatment System (GWTS) Operational Assistance, Tampa, Florida, 2018-2019. Assist with field management, monthly inspections, troubleshoot equipment problems, perform as needed GWTS sampling, replaced wells, pumps, tubing as necessary for optimal performance.

Confidential Client, Phase II ESA, Underground Storage Tank (UST) Removal. While conducting a Phase I ESA, Donovan identified Recognized Environmental Conditions (RECs) in connection with historical site use. A GPR survey and a Phase II ESA were conducted to determine if USTs were present at the site and if groundwater at the site had been impacted by the RECs. Orphan USTs

were identified and assessment was conducted to horizontally and vertically delineate the impacted groundwater area. The USTs were removed, and a source removal was performed at the Site and a No Further Assessment status was granted for the Site.

Oil Spill Prevention and Preparedness

Confidential Manufacturing Facility, Warrenton, Georgia, SPCC Plan. Performed the site visit, interviews, and reviewed numerous topographic maps and assisted with preparing the SPCC plan.

BWI, Orlando, Florida, 5 Year SPCC Plan. Performed the site visit, interviews, and reviewed numerous topographic maps and assisted with preparing the SPCC plan.

Landfill

Dekalb County Landfill, Dekalb, Georgia, 2021 Performed construction oversight for a 15 acre new landfill cell.

Desoto County Landfill, Arcadia, Florida, 2019- Performed construction oversight for a 12 acre new landfill cell and partial closure.

New Hanover County Landfill, North Carolina, 2021- Performed construction oversight for a 30 acre partial closure.

Osceola County Landfill, Semiannual, Kissimmee, Florida 2020- Current- Performed semiannual groundwater compliance sampling.

Salinas, Puerto Rico, 2019- Performed construction oversight for a 14 acre new landfill cell.

Various Clients, New Landfill Construction and Closures. While with Atlantic Coast Consulting, Donovan completed over 200 acres of liner installation in Florida, Georgia, New Mexico, South Carolina, Texas, Virginia and Wyoming. Responsibilities included:

- Provide Construction Management and CQA services at numerous solid waste landfills. Landfill construction oversight from beginning of cell construction and closure to completion.
- Management of all aspects of landfill cell and closure construction including coordination with contractors, surveyors, suppliers, and engineers.
- Perform inventory of material and supplies delivered (geomembrane, geocomposite, geotextile, etc.) to ensure all required material is available for installation in advance of the scheduled work. Track the quantities placed, including stored materials, during construction.
- Observation and daily documentation of geosynthetics installation.
- Coordinate/schedule with contractors and the laboratory for conformance sample collection and testing for soil and geosynthetic materials.
- Review as-built drawings prepared by surveyors for accuracy.
- Involved during preparation of certification reports required upon completion of the project.

Landfill Gas

Advanced Disposal Wolf Creek, Macon, Georgia - Provided construction oversight of 15 vertical gas wells.

Escambia County Landfill, Florida- Provided assistance with diagnostics of the landfill gas collection system.

Hillsborough County Landfill, Florida- Provided assistance with surface emissions monitoring for 2 landfills located on site.

Manatee County Landfill, Florida- Provided assistance with diagnostics and plant maintenance of a gas to energy facility. As well as monthly wellfield tuning of landfill gas quality for compliance and performance. Conducted quarterly surface emissions monitoring.

Orange County Landfill, Florida- Provided assistance with surface emissions monitoring for 6 landfills located on site.

Republic, Cedar Trail, Bartow, Florida- Provided oversight of tier II gas sampling, as well as, monthly and quarterly probe monitoring compliance.

Republic, Timberlands GCCS, Alabama- Provided construction oversight of a new landfill gas collection system.

All Appropriate Inquiry

Various Clients, Phase I ESA. While serving in the Tampa office, Donovan has performed numerous Phase I ESAs throughout Florida.

Macquarie, Phase I ESA for 16 Facilities- Donovan served on a team in a multi-state 16 facility Phase I operation for WTE facilities. Donovan was responsible for site visits and reporting of 2 of the 16 facilities.
